

# Training Feedback

Name and Surname: Zakia Matthey

Training: ABAP Object Oriented

Date conducted: from January 2022 to September 2022

Location: Online class

Name of the Instructor: Ladislav Rydzyk – Founder of ABAP Academy

## **Evaluation :**

### **1. Were the written materials of good quality?**

The training materials were of a very high quality either video recorded or written extra documents. Really complete.

⇒ Suggestion for the videos: I experienced a hard time having the video on the half of the screen (screen split) in order to work on the other half in SAP. This is not possible with the integrated video played used by ABAP Academy it can give either small size or full screen.

### **2. Was the instructor friendly in terms of content presentation?**

Absolutely. The Ladislav is a so far the best instructor I've ever had thanks to his unique methodology that works very well with our way of learning and perceiving information.

### **3. Was the instructor well-informed in the subject matter?**

Absolutely. Ladislav is an expert in the ABAP development and masters completely the whole subjects about ABAP OO.

### **4. Was the training exercise too long?**

Overall, no. Even though they may take some time, I found them very interesting and a must to do.

### **5. Was the coach supportive in terms of content acquisition?**

Absolutely. Very supportive and available. Whenever I asked a question, he really took his time to explain it in a very detailed way. Also, his way of explaining things makes it very understandable and easy to learn and reproduce.

**6. Was the training relevant and helpful?**

This is the most interesting ABAP course I've had. It helped me a lot in my job as I can go through all ABAP OO programs now and understand them, even the SAP standard ones.

**7. How would you comment on the learning experience? (did you find it easy to grasp all the concepts taught?)**

With Ladislav unique way of teaching, I found it really rich and easy to understand. Especially with him doing the very same codes in SAP in the video.

**8. Would you recommend this training?**

If you are interested in learning ABAP OO and committed, do not hesitate to go for it because it is the most complete, rich and student-friendly training that you could find. In addition to that, the instructor is a rare pearl not easy to find.

**Overall comments:**

This training is very rich and helpful to fully understand the OO concept. I have really nothing to improve as all the content is a must to learn.

If I were asked which part, should we remove or reduce, I would say none. Everything is necessary and interesting to learn.

Just one comment: this training takes really time so if you feel like you cannot have at least one day (or 10 to 12 hours) per week dedicated to it, you cannot finish it in 3 to 4 months.

I insist on the fact that before taking the class we really should be considering a commitment of availability and dedication to it.

**VERY WELL DONE**
